DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I, claims 1 – 4 and 7, in Paper No. 8 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 – 3 and 7 are rejected under 35 U.S.C. 102 (b) as being anticipated by Possati et al. (US 5,299,360).

Possati et al. discloses a device having a stylus / touch probe comprising a stem (12), and a break-off region (14) provided in the stem consisting of a changed structure of a stem material. Possati et al. discloses the break – off region formed along the circumference of the stem (See Figure 1). Possati et al. discloses the diameter of the stem (12) at the break – off

point, in a broad sense, considered to remain substantially unchanged, since the area of deflection is so small that will not give a considerable change in the diameter of the stem .

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Possati et al. (US 5,299,360).

Possati et al. discloses a device as stated in paragraph 3 above.

Possati et al. does not disclose the stem made of a hard metal as stated in claim 4.

Regarding claim 4 : Possati et al. discloses a device having a stem (12) which in a broad sense can be considered to be made of a hard material, i.e., metal, but the particular material has not been disclosed. The particular type of material used to make the stem, absent any criticality, is only considered to be the use of a “ preferred ” or “ optimum ” material out of a plurality of well known materials that a person having ordinary skill in the art at the time the invention was

Art Unit: 2859

made would have find obvious to provide using routine experimentation based, among other things, on the intended use of Applicant's apparatus, i.e., suitability for the intended use of Applicant's apparatus. See *In re Leshin*, 125 USPQ 416 (CCPA 1960) where the court stated that a selection of a material on the basis of suitability for intended use of an apparatus would be entirely obvious.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dubois-Dunilac et al. (US 5,321,895) discloses a contact sensing probe comprising a stylus (13) and a break – off region (10) provided in the stem. Madlener et al. (US 5,355,589) discloses an apparatus having a stem and stylus (7b) having a break – off point (9) provided in the stem. Hajdukiewicz et al. (US 5,404,649) discloses a touch probe having a stem and stylus (16, 28) having a breaking – off point (26, 29).
